ATOMIKAIR®

BENEFITS

IMPROVE INDOOR AIR QUALITY

ATOMIKAIR® filters air at crucial occupant level and reduces dust build-up on equipment and in the environment.

CREATE SAFER ENVIRONMENTS

Evenly distributed temperatures and fewer pollutants in the air eliminate stagnant air issues.

REDUCE COSTS

Destratification improves energy efficiency and lowers heating costs by 20%-40%. Decreases particulate and dust build up to reduce repair costs and product quality.

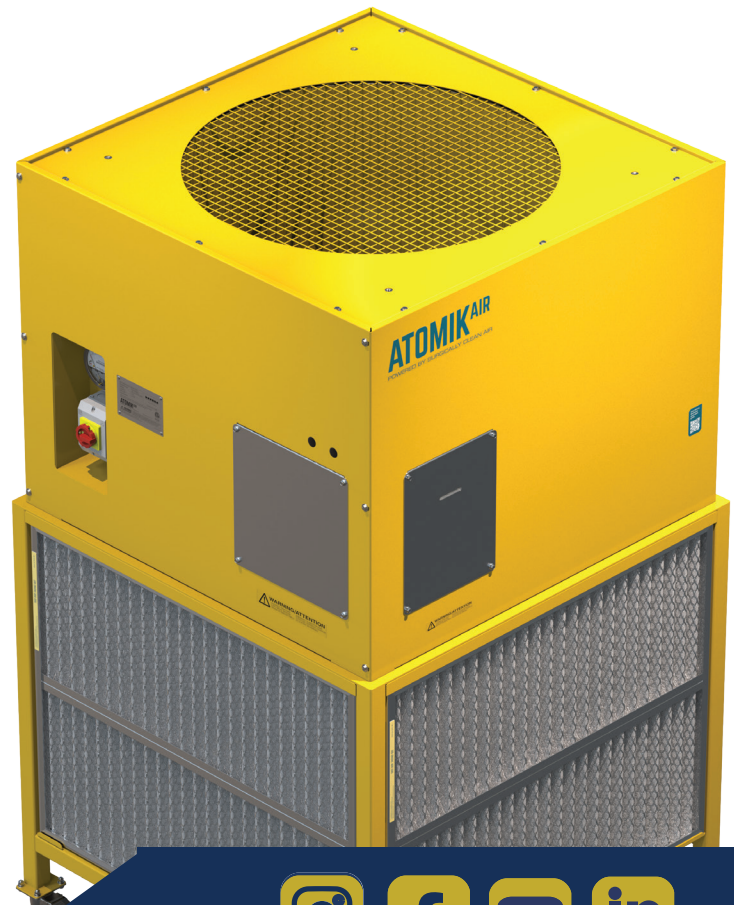

FEATURES

RECESSED CONTROLS

The disconnect switch and pressure gauge are now recessed to prevent damage while in transit and on-site, further extending the life of your ATOMIKAIR® components and reducing maintenance and downtime.

DEDICATED POWER CABLE STORAGE

The dedicated power cable storage opening allows the power cable to remain inside the recessed compartment, protecting it from damage during use and shipping and further extending the life of these components.

ATOMIKAIR®

FEATURES

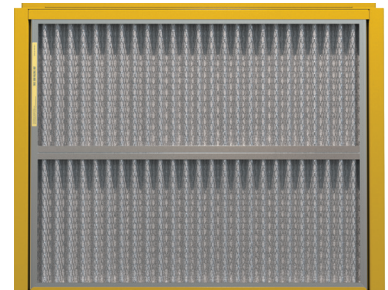

FLUSH CASTER PLATES

The updated caster plate design reduces the unit's overall width making the ATOMIKAIR® more cost-effective to transport. This improvement allows two units to fit side by side in a standard truck trailer, optimizing shipping and storage logistics.

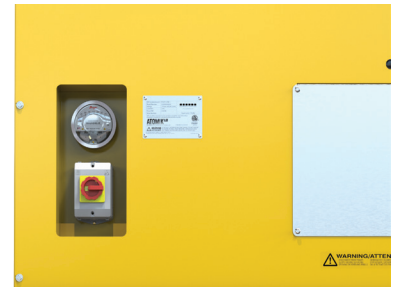

INTERNAL FILTER BUCKLES

The removal of external filter clips simplifies the filter replacement process and decreases wear and tear and the likelihood of damage.

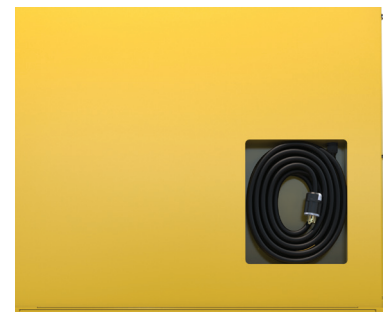

RECESSED CONTROLS

The disconnect switch and pressure gauge are now recessed to prevent damage while in transit and on-site, further extending the life of your ATOMIKAIR® components and reducing maintenance and downtime.

DEDICATED POWER CABLE STORAGE

The dedicated power cable storage opening allows the power cable to remain inside the recessed compartment, protecting it from damage during use and shipping and further extending the life of these components.

ADDITIONAL FEATURES

- Superior Multi-Stage Filtration
- Efficient EC Motor with Variable Speed and Intuitive Controls
- Reusable/Easy to Clean Filters
- Mod-Bus RTU Support
- Serviceable fuse
- Fault indicator LED
- Durable Steel Construction

ATOMIKAIR®

MERV 13 FILTERS

FIVE MERV 13 FILTERS

Captures 99.97% of Particulates as small as .03 microns

REUSABLE & EASY TO CLEAN

Cost and Resource Effective

For tips on reducing filter costs, check out the **ATOMIKAIR® Kleaner Kart** section to see how pairing with the **ATOMIKAIR®** can boost performance and savings.

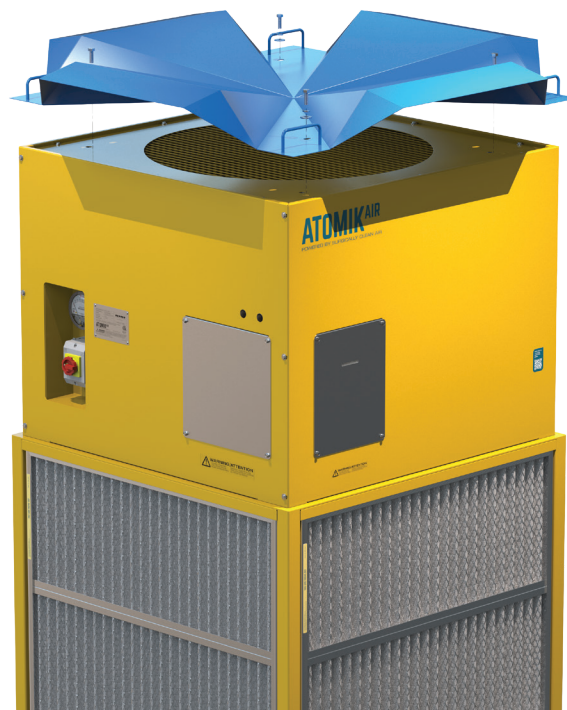

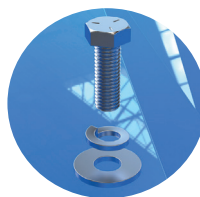

ACCESSORIES

SUMMER HOOD

The ATOMIKAIR® Summer Hood generates a cooling airflow by redirecting and recycling cooler floor-level air to the occupant level.

This stratified airflow maximizes ATOMIKAIR®'s cooling potential and delivers cool air precisely where it's most needed: among your employees. Research indicates that an 8-mph breeze can reduce the perceived temperature by up to 12°F.

The Summer Hood's 160' wide coverage effectively channels cooler surface air towards your employees, leading to significant reductions in perceived temperatures and a boost in productivity.

NEW! **ATOMIKAIR®**
Kleaner Kart

SURGICALLY CLEAN AIR®

FEATURES

- Robust 20-gauge steel housing
- Heavy-duty, easy roll lockable casters
- Baked-on powder coat finish
- Portable, indoor vacuum-extraction system
- Utilized alongside a standard shop vac or central vac systems, and an air compressor

**Transforming Filter
Cleaning for a Healthier,
Safer Workplace.**

BENEFITS

BOOSTS ATOMIKAIR® SYSTEM EFFICIENCY

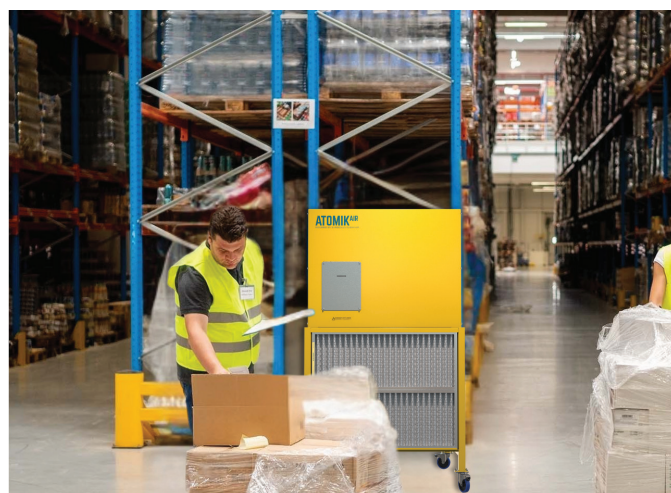

Improve airflow and air quality by keeping filters cleaner right at the source.

HELPS REDUCE MAINTENANCE COSTS

Extend filter life, reduce replacements, and clean filters faster indoors using a portable, easy-to-use design.

ENHANCES EMPLOYEE COMFORT

Support employee well-being by containing particulate matter during filter cleanings and minimizing air disruption.

**Designed to work seamlessly with the
ATOMIKAIR® industrial air purification
system**
